Overleaf instructions □ Access-2026-38745

Single instruction PDF for the collaborator. Official IEEE letter = English PDF. Do not upload to IEEE until the highlighted manuscript is checked against this pack.
32-bit / Arancino experiments: after this resubmission (future work only).

What to send together (to the Overleaf collaborator, not yet to reviewers)

1. This file.
2. `Access-2026-38745_Response_to_Reviewers.pdf` (English, official).
3. `Access-2026-38745_Resposta_aos_Revisores.pdf` (Portuguese, helper).
4. Optional: `MANUSCRIPT_REPLACEMENTS.md` and `09_values/FUTURE_WORK.md`.

Replace in the .tex / Word source

1. Entire abstract □ N=30 rates 11/30 vs 30/30 with medians 3,083.210 / 2,104.770. 100 PE, 9,000 launches, 60 s / 120 s. Compatibility ? equivalence. Do not write that short-lived runs are mostly crashes.
2. Every 31 / 3,100 / 155 / 17+14 / 10 s sentence.
3. Table 4 SkewMask: 11/30 vs 30/30; delete 9/31.
4. Table 5: delete 155/155; paste letter Table 2 (60 s survival).
5. Table 7: delete ?87.2 / ?38.5; paste letter Table 4 (malicious persistent TMW_DO = +37,387 [26,146, 42,770], n_pairs=23; TMW_DM malicious SL WS +0.451 [0.049, 0.805]).
6. □VI: 120 s / 60 s / NAT□EMPTY□TMW0 / seed 705851366. sample_count>0 is post hoc.
7. □VIII: strike items 4, 5, half of 7, N=30, AntiDebug 3+3. Add 32-bit Pin 3.28 ia32 and Arancino shared-protocol bake-off (`FUTURE_WORK.md`).
8. Conclusion: no transparency, no Arancino win, no □malware used the five checks.□

Highlight

Yellow on every changed sentence, including the abstract. Then export a clean PDF+source.

Do not mix

IEEE 9,000-run campaign ? JCVHT paper. Oracles ? 100-PE corpus. Etapa 5 counters (other DLL) ? 9,000 JSON. Etapa 7 (1,800 exits) does not rewrite the 9,000.

Stop conditions (do not submit if any remain)

□ 155/155, ?87.2, ?38.5, 9/31, 10 s as current protocol, 3,100 launches.
□ □crash-exit□ as the meaning of the 6,517.
□ □sample_count>0 was a priori.□
□ □TOMWare outperforms Arancino□ or □malware used the five checks.□
□ Old letter numbers: timing medians 2,418 / 3,079; TMW_DO malicious P +37,057 [131, 42,770]; malicious persistent EMPTY wall-clock 13,266.

After Overleaf export

Send the new PDF back for the Etapa 11 check against MANUSCRIPT_VALUES.json. No git commit and no IEEE upload until that check and an explicit authorization.
